SUMMARY

Graduated BEng in Software Engineering from IIC University, with hands-on experience in mobile and full-stack development. Skilled in Java, Android, React Native, Next.js, Firebase, and backend systems, with a strong focus on building real-world, user-centered applications. Currently awaiting certificate completion from the Java Institute of Advanced Technology. A motivated and adaptable software engineer with a solid work ethic, strong teamwork and communication skills, and the ability to quickly learn and apply new technologies. Passionate about continuous learning, UI/UX design, and delivering high-quality digital solutions

EDUCATION

O/L Exam | Walisinha Harischandra College, Anuradhapura | 2015

G.C.E. Ordinary Level | Walisinha Harischandra College, Anuradhapura | 2019

Graduate – Software Engineering (BEng Hons) | IIC University (Java Institute for Advanced Technology)| 2021 – 2025

TECHNICAL SKILLS

- **Programming Languages**: Java,TypeScript, PHP, JavaScript,HTML, CSS
- **Web Frameworks**: ReactJS, React Native, Next.js, Vite.js, Chart.js, Express.js, Tailwind CSS, Bootstrap, Hibernate, Spring Boot.
- **Mobile Development**: React Native, Expo, Android (Java), Flutter (Basic)
- **Databases**: MySQL, Firebase, SQLite.
- **Vibe Coding Tools**: Cursor, GitHub Copilot,kilo code, Google Antigravity IDE,
- **Version Control**: Git, GitHub

PROFESSIONAL EXPERIENCE

- Worked as a freelance software developer, successfully delivering client projects with user-focused and functional solutions. Designed demo websites to present application features and UI/UX concepts, and developed mobile applications using modern frameworks with a focus on performance and clean code. Collaborated closely with clients to gather requirements, implement feedback, and ensure timely delivery while following best practices in development and design.

PROJECTS

BunnyChat | Cross-Platform Real-Time Messaging Application

React Native (Expo), Firebase, FlashList, Expo Router

- Developed a high-performance messaging application using a Java backend and React Native (Expo) frontend. Integrated Firebase for authentication and FlashList for optimized UI performance across Android, iOS, and Web. Engineered real-time features including image sharing and instant messaging with a minimalist, responsive design focused on scalability and native-like user experience.

SkillLink | Native Android Job Matching Marketplace

Java, Android SDK, Firebase (Firestore/Auth/FCM), Material Design

- Developed a native Android app using Java to connect customers with skilled workers, integrating Firebase Firestore for real-time data and FCM for chat and notifications. Built a secure, scalable platform with job posting, multi-user authentication, and a responsive Material Design UI.

Ticket Booking App | Full-Stack Integration Specialist

React Native (Expo), TypeScript, Spring Boot & PostgreSQL

- Led the end-to-end integration between a Spring Boot backend and a React Native (Expo) frontend to deliver a seamless event booking experience. I implemented secure API communication for authentication and real-time ticket management within a modern Ticket Booking App -themed interface. By leveraging TypeScript and Context

Futmall.com | Java-Based E-Commerce Platform

Java Servlets, Hibernate, MySQL, JSP & Bootstrap

- Developed a dynamic e-commerce web application leveraging Java Servlets for server-side logic and Hibernate ORM for efficient data persistence and mapping with a MySQL database. I designed the frontend using JSP and Bootstrap to ensure a responsive and user-friendly interface. The project focuses on handling complex web workflows, including product management and secure data transactions, while maintaining a clean separation of concerns through standard Java web architecture.

Hospital Management System | Enterprise Desktop Application

Java EE 7, Hibernate ORM, MySQL, Lombok & GlassFish Server

- Developed a robust enterprise-grade desktop application for hospital management using Java EE 7 and NetBeans IDE. I implemented Hibernate ORM for efficient database interaction with MySQL, while leveraging Project Lombok to minimize boilerplate code and enhance maintainability. The system was engineered to handle complex healthcare workflows, including patient records and appointment scheduling, deployed and tested on the GlassFish 4.1 application server with JDK 11 to ensure high reliability and data integrity.

ADDITIONAL PROJECTS

Next.js & TypeScript Web Development

Next.js, TypeScript, Tailwind CSS & UI/UX Design

- **Enterprise POS System**: Developed a high-performance hardware POS (Point of Sale) system featuring real-time inventory tracking and sales management using Next.js and TypeScript.
- **E-Commerce Platforms**: Architected and deployed full-scale clothing brand e-commerce stores with secure product catalogs and seamless checkout experiences.
- **Brand Landing Pages**: Designed and developed high-conversion landing pages for gym and fashion brands, focusing on minimalist luxury aesthetics and modern typography.
- **UI/UX Design & Prototyping:** Specialized in creating modern, user-centric interfaces for e-commerce and landing pages, utilizing advanced layout techniques to ensure high visual impact and responsiveness.

ADDITIONAL INFORMATION

LANGUAGES: ENGLISH, SINHALA,

I possess a versatile technical background rooted in **Object-Oriented Programming (OOP)** and **Design Patterns (OODP)**, ensuring the delivery of scalable and maintainable software solutions. My expertise extends across **C#/.NET** application development, **IoT development**, and **WordPress** customization, complemented by a strong focus on **SEO** to maximize digital reach. Furthermore, I am highly proficient in leveraging **Vibe Coding** and AI-assisted development tools to rapidly prototype and deploy high-quality web and mobile applications. Currently, I am collaborating with a professional team at **Braintisa** on various client-facing projects**, while preparing to pursue a Master's degree to further enhance** my engineering expertise and technical leadership.
